

# Air Reservoirs

## Test and service solutions...

Many years of experience and in-depth industry knowledge mean that Tecforce is superbly equipped to offer a thorough test and overhaul service for Air Reservoirs.

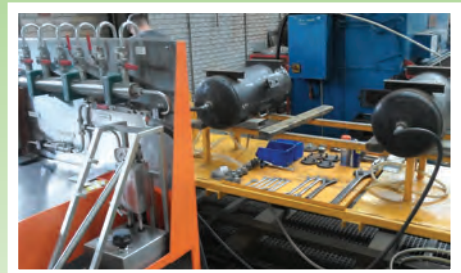

Supported by our core skills in materials technology, welding technology, Non Destructive Testing and traction and rolling stock engineering, our Air Reservoir service provides clients with reliable repairs and thorough, detailed overhauls.

As one of only three companies that is RISAS accredited for Air Reservoir overhaul we can confidently promise - and deliver - a high quality service.

*Processes are specifically aligned to customer requirement and typically include:*

- > **Washing reservoirs in a contained pressure wash facility.**
- > **Bridge Labeling to reduce the risk of future corrosion**
- > **Air reservoir repair service**
- > **Visual/NDT inspection internal and external depending on criteria**
- > **Pressure Testing using current standards.**
- > **Shot blasting external and internal surfaces is available to improve the reliability of inspection and improve surface preparation for painting**
- > **Painting external and internal surfaces is available to reduce the effects of vehicle contamination that causes corrosion degradation**
- > **Tapping out boss threads to ease vehicle installation**

We offer the options of collection or our consistent on-time delivery to reduce turnaround times and other safety critical services to the point of delivery. We also offer provision of a float fully compliant with BSEN 286 to reduce the risk of vehicle programme delays.

“ RISAS accredited, a thorough and detailed service, unrivalled skill sets and on time delivery - everything you need in an Air Reservoir test and overhaul service ”
