

Tried, Tested, Trusted... Servicing, skills & expertise you can rely on!

Component Servicing

Component Servicing is supported by our core consultancy skills of; materials technology, welding technology, Non Destructive Testing and traction and rolling stock engineering. This comprehensive skill-set enables us to integrate failure analysis and remaining life assessments into our component servicing provision.

We work to existing Vehicle Maintenance Instruction and Component Overhaul Instructions, adding value to the process by understanding the application and exploring with clients opportunities for product improvement.

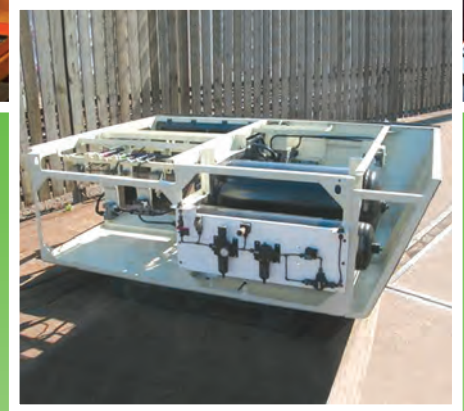

Our specialist knowledge routinely creates the opportunity for cost savings by overhauling or repairing components that are costly to replace or have long lead times.

Component Servicing timescales are routinely structured to return components in very tight timescales to meet existing maintenance schedules and minimise spares float costs.

Our clients have the reassurance that components are maintained in accordance with industry requirements and are supplied with certificates of conformance.

For example we provide Component Servicing to:

- > **Air Reservoirs**
- > **Gangway Faceplates**
- > **Couplers**
- > **Fuel Tanks**
- > **Bogie repairs**
- > **Equipment rafts and cases**
- > **Springs**
- > **Axle boxes**
- > **Exhausts**
- > **Sumps**
- > **Brake Modules**

“ With accreditations which meet demanding industry standards we deliver added-value by applying our engineering capability to create improvements in overhaul processes ”
