

# Knowledgeable, sound, accurate advice based on in-depth industry experience...

## Consultancy

Our consultancy services are specifically aligned with our core skills; materials technology, welding technology, Non Destructive Testing and traction and rolling stock engineering to provide clients. Our objective, and indeed mission, is to always provide clients with reliable detailed advice, combined with accurate insights and innovative, effective solutions.

Our specialist industry knowledge enables us to engage with our clients to quickly and efficiently gain an understanding of the issues. We draw from our core skills to examine the evidence and its relevance. After detailed consideration we report and explain our finding to clients in a manner which is helpful, adds value and is jargon free.

*We offer various safety critical consultancy solutions including:*

- > **Welding Engineering**
- > **Metallurgy**
- > **Non Destructive Testing (NDT)**
- > **Engineering**
- > **Failure Analysis**
- > **Remaining Life Assessments**

Following on from our report we are able to offer repair or manufacturing solutions to help resolve any problems or exploit opportunities for improvement that have been highlighted during investigation.

With a long history of problem-solving combined with an incisive skill of identifying opportunities for change and enhancement, clients can be assured that Tecforce's comprehensive package of consultancy services will meet - and exceed - expectations.

“ Comprehensive and always-current core skills ensure that we analyse and report thoroughly and clearly - delivering an action plan designed to make a positive difference ”
