

Skills, experience & technology, delivering successful solutions...

Products & Services

For more than 20 years the Tecforce team has been servicing and supporting the rail industry by providing expert and comprehensive solutions to a wide range of rolling stock repair problems.

Highly experienced and committed to delivering the most reliable and cost-effective solutions, our experienced team apply specialist knowledge and problem-solving skills to routinely create the opportunity for cost savings by overhauling or repairing components and bodysells that are costly to replace or have long lead times.

Our core skills in materials technology, welding technology, non-destructive testing and rolling stock engineering combine with a positive and responsive approach to provide our clients with a unique range of services applied to railway rolling stock, their components and supply chain.

These are delivered through the following services:

- > **Consultancy**
- > **Component Servicing**
- > **On Depot Servicing**

Our key skills include: -

- ◆ **Materials Technology**
- ◆ **Welding Technology**
- ◆ **Non Destructive Testing**
- ◆ **Rolling Stock Engineering**

“ We work to existing Vehicle Maintenance and Component Overhaul instructions - adding value to the process by thoroughly understanding the application and exploring with clients opportunities for product & process improvement. ”
